Trigram search

From Wikipedia, the free encyclopedia

It has been suggested that this article be [merged](#) into [search algorithm](#).
([Discuss](#)) *Proposed since January 2015.*

This article **does not** [cite](#) any **references or sources**. Please help [improve this article](#) by [adding citations to reliable sources](#). Unsourced material may be challenged and [removed](#). *(July 2009)*

Trigram search is a method of [searching](#) for text when the exact [syntax](#) or spelling of the target object is not precisely known. It finds objects which match the maximum number of three-character [strings](#) in the entered search terms, i.e., near matches. A threshold can be specified as a cutoff point, after which a result is no longer regarded as a match.

This [computer science](#) article is a [stub](#). You can help Wikipedia by [expanding it](#).
