Set partitioning in hierarchical trees

From Wikipedia, the free encyclopedia

(Redirected from [Set Partitioning in Hierarchical Trees](#))

Set partitioning in hierarchical trees (**SPIHT**)^{[1][2]} is an image [compression algorithm](#) that exploits the inherent similarities across the subbands in a [wavelet decomposition](#) of an image.

Contents [\[hide\]](#)

- 1 General description
- 2 See also
- 3 References
- 4 External links

General description [\[edit\]](#)

The algorithm [codes](#) the most important wavelet transform [coefficients](#) first, and transmits the bits so that an increasingly refined copy of the original image can be obtained progressively.
